BUILD YOUR  
KINGDOM

Construction of Surreal Sci-Fi Ecological Platform

# FOREWORD

---

Build Your Dream Kingdom is an ecological platform for building a future surreal sci-fi game with games as a carrier, in which people can observe new mechanics and experience full immersion in digital reality without stopping. Every player has the opportunity to enjoy not only the fun of being immersed in the game world, but also the colorful ecological application environment.

In the Build Your Dream Kingdom ecological world there is an opportunity for every player user to earn real money and find new friends who may become their companions on the road to success, like-minded friends.

Build Your Dream Kingdom is a breakthrough in the gaming and financial industries, made possible thanks to WEB 3.0 and the infinite possibilities of this new world. The habitual way of life has changed beyond recognition. Technology has entered our lives to the point where it is irreversible. Finance, economy, everyday life – most of which are already powered by the Internet and fully digitized.

**BUILD YOUR  
KINGDOM**

Construction of Surreal Sci-Fi Ecological Platform

# **BIRTH BACKGROUND**

---

## **1.1 metaverse world**

Thirty years ago, science fiction writer Neil Stephenson first proposed the concept of "Metaverse" in his novel "Snow Crash". Meta means "meta", "transcendence", and verse refers to The universe, together, the metaverse refers to a virtual world parallel to the real world supported by technologies such as AR (augmented reality) and VR (virtual reality). In his original vision, "Through a digital avatar (Avatar), people can live in a virtual three-dimensional space, in this virtual world, everything in the real world will be digitally replicated, and people can complete all reality in the virtual world. Things in life, such as eating, exercising, gaming and socializing with friends, etc. In addition, people can also try "ambitions" that are difficult to achieve in the real world, such as teleportation.

In a world where people are increasingly using the internet as their primary form of service connection and self-expression, the metaverse is logically the next one we create, consume and interact with digitally. The masses use Non-Fungible Tokens (NFTs) to earn income through gaming, increasing interest and attention. On the metaverse of Facebook and other companies, a world-driven physical separation due to the pandemic all point to a clear trend in demand for more comprehensive online platforms than currently exist.

**BUILD YOUR  
KINGDOM**

Construction of Surreal Sci-Fi Ecological Platform

The Metaverse imitates the social interaction mechanism between residents through dialogues, games, transactions, virtual festivals, concerts, fashion shows, sporting events, exhibitions, etc., giving people a sense of real-time presence. And such a unique environment that exists in parallel with the real world aims to promote the development of a new economy – the NFT economy, which is rapidly taking root and integrating with the traditional economy.

## 1.2 The era of Wbe3.0 has come

Web3.0 is a more open, fair and secure network. Its network form is not a simple upgrade of the current Web2.0. The core problem to be solved is actually the distribution of platform benefits. Web3.0 should try to solve the problem of benefit distribution on the basis of motivating people's initiative and value creation. The distribution of benefits is closely related to the form of organization. Web3.0 is not to build a castle in the air on a blank space, it is committed to solving the deep-seated problems in the development of human society.

An overview of Web3.0 in one sentence is that the web3.0 token is power. With the help of the token economy, creators can truly get the benefits of creation. In the web3.0 era, users can become creators and builders. User information does not belong to any centralized entity. Users only need to log in with one click, and they can swim on major platforms and dapps, thereby obtaining a new and better experience. In the era of Web 3.0, information and services are jointly formulated by each connected individual, and the

**BUILD YOUR  
KINGDOM**

interests are owned by all, a true sharing economy. The 3.0 era is what we are currently exploring and can change the production relations in the real society. In the 3.0 era, real-world physical assets can be tokenized, and ownership can be subdivided and distributed across regions. Everyone is both a producer and a consumer. Collaborate with each other to obtain benefits and exchange them for what you want.

### 1.3 DAO organization

The concept of DAO distributed autonomous organization was first proposed by American writer Ori Brafman in a book called "The Starfish and the Spider". This is an organization with no centralization, downplaying hierarchy, and no top-down relationship. Each member of the organization has its own set of tasks and goals. They collaborate with each other and execute goals through the blockchain, ultimately contributing to the collective completion of the goal.

As a decentralized autonomous organization, the management and operation rules of the DAO will be encoded on the blockchain in the form of smart contracts, enabling it to operate autonomously without centralized control or third-party intervention. The program under this design is transparent and is not affected by the central organization. Through intelligent management methods and token economic incentives, it can realize self-operation, self-governance, and self-evolution, thereby realizing the organization's maximum efficiency and value circulation. . Additionally, all resolutions will be

BUILD YOUR  
KINGDOM

voted on on proposals, ensuring that everyone in the organization has a free voice.

Compared with traditional organizational forms, DAOs are more secure and stable because no one can control the entire organization. And, because the DAO runs on permissionless, decentralized blockchain technology, it is able to remain autonomous without external interference. In addition, better distribution of power makes DAOs more equitable in resource allocation and decision-making than traditional enterprises. These advantages have made DAO more and more popular and high-profile.

On March 10, 2021, the U.S. state of Wyoming officially passed the DAO Act. This means that the DAO will be chartered and recognized by the Wyoming government, the LLC is expected to be transformed into a DAO, and the term DAO, LAO, or DAO LLC will appear in the official registry. DAO is expected to become the fourth organizational form outside the country, market, and company, forming a new business transformation.

In addition to changes in operating models, in the future, a variety of financial services will continue to emerge based on DAOs, such as: global manufacturing platforms, interest-free loans, person-to-person goods and services that follow community guidelines Wait. More importantly, these services are available to anyone in the world. All in all, DAO will be an efficient way to create a global scale of cooperation and provide a more efficient and secure business management model.

**BUILD YOUR  
KINGDOM**

## 1.4 NFT+DEFI+Game

GameFi is the concept of "gamified finance" under the fusion of DeFi and NFT. It presents financial products in the form of games, gamifies the rules of DeFi, turns game props and derivatives into NFT, and adds traditional games such as battle and social interaction. , increase the entertainment and interactivity of the participants, and enhance the personal interest in the game. GameFi is becoming more and more popular, and it is the next hot spot. With the concept of Defi, you can earn while playing. Compared with traditional games, it has increased the method of monetization. break out.

Create, buy, sell and trade NFT freely, Metaverse's GameFi gameplay and profit model make the blockchain gaming circle interesting. It has brought numerous players and numerous investors and institutions. The development of blockchain gaming has also facilitated digital commodity trading.

## 1.5 social is king

Aristotle profoundly pointed out in "Politics": "In essence, man is a social animal; those individuals who are born to live in isolation are either not worthy of our attention, or are not human." In other words, it's instinct. Human beings are such a social animal that they can't help but want to record their lives, to express themselves, and to have some connections and interactions with others. From the era of web 1.0 to the era of web 3.0, the way people socialize has changed, but the fundamental need for social interaction has never changed.

**BUILD YOUR  
KINGDOM**

In the metaverse era, the social immersion and facilitation brought about by changes in social methods will enable human social needs to be satisfied unprecedentedly, thereby creating more social needs. Humanity's reliance on social interaction will be magnified and strengthened like never before. Therefore, in the metaverse economy, it is bound to seize this underlying demand and connection, take socialization as the king, and continuously expand its territory.

BUILD YOUR  
KINGDOM

Construction of Surreal Sci-Fi Ecological Platform

# **ABOUT BUILD YOUR DREAM KINGDOM**

---

## **2.1 What is Build Your Dream Kingdom?**

Build Your Dream Kingdom launched a hyper-realistic sci-fi game ecological platform based on blockchain technology. In the context of distant future sci-fi, it has built a strong social interaction for users, combining urban development civilization and even interstellar metaverse large-scale games, Build Your Dream Kingdom platform It not only focuses on the development, distribution and trading of game assets, but also many ecosystems. It is 100% operated by its community DAO to drive development and governance, and users who own and own their own governance token (Build Your Dream Kingdom) will be able to make decisions.

Build Your Dream Kingdom is Metaverse's first super-futuristic sci-fi blockchain game, with delicate and smooth graphics, a strong sense of substitution and an excellent experience. Through 3D modeling, the architectural space is made clear. Diverse city scenes provide players with more choices and rights.

Build Your Dream Kingdom combines the concept of NFT+Defi with games, and the combination of social and financial aspects meets their psychological needs. Build a GameFi ecosystem through an ecosystem integrated with liquidity pools, liquidity mining, and NFTs+DeFi+ games. And create a unique, updateable and tradable NFT, and provide a wealth of ecological application scenarios,

**BUILD YOUR  
KINGDOM**

Construction of Surreal Sci-Fi Ecological Platform

including chain games, decentralized exchanges, liquidity mining, social and other governance application scenarios, create unlimited expansion and respect the new financial paradigm real ecological vision.

## 2.2 Core idea

The core value concept of Build Your Dream Kingdom is community self-governance, to achieve transparency, fun, health, and to be fairer and more sustainable, with a super ecological platform that can benefit all involved. Build Your Dream Kingdom wants people to have fun on the platform, whether it's games or other products, communicate freely with each other, and have the opportunity to bring financial freedom.

Especially in the future, the interactive social, entertainment and social business production relations between people will be transferred to the virtual world, so a super ecology is created in the virtual space, providing tools and resources to create a fun and adaptable environment for users. Environment to achieve a prosperous and profitable platform, this is the social responsibility and core philosophy of Build Your Dream Kingdom.

## 2.3 Team

The Build Your Dream Kingdom team has a large group of highly skilled blockchain developers with years of experience building DeFi and NFT products. Many of the Build Your Dream Kingdom team members are drawn

**BUILD YOUR  
KINGDOM**

from an all-star team of game development industry veterans adept at applying cutting-edge technology and multimedia solutions, and our goal is to use our strengths together to build something new and groundbreaking. Our fully remote team is working around the world... combining artistic prowess, technological innovation and business leadership to set new standards in gaming.

The Build Your Dream Kingdom team has not only created an amazing Play-to-Earn blockchain journey with many opportunities and adventures, they have also created a complete DeFi ecosystem including mining pools, staking, marketplaces , in-game launchpads, boosters, and more.

**BUILD YOUR  
KINGDOM**

Construction of Surreal Sci-Fi Ecological Platform

# ***TECHNICAL HIGHLIGHTS***

---

## **3.1 Decentralized operation**

The decentralized trusted network of Build Your Dream Kingdom will become an important credit and security guarantee in the Web3.0 era. The trusted network of Build Your Dream Kingdom consists of five parts:

### **1) Trusted identity:**

Trusted identity refers to the user's independent creation based on the public key, signature with the private key, node verification, and the storage of identity data is controlled by the user.

### **2) Trusted ledger:**

The essence of blockchain is distributed ledger technology. Through multi-party bookkeeping, the ledger is credible, reliable, transparent and cannot be tampered with. When transferring value on the Build Your Dream Kingdom network, it is necessary to ensure that the value transfer without centralized credit endorsement is reliable.

**BUILD YOUR  
KINGDOM**

### **3) Trusted Computing:**

Trusted computing means "trustless computing". Multi-party secure computing, which is currently being studied by more than half of the cryptographers in the world, is an important solution for trusted computing. Trusted computing is to solve the problem of how to complete collaborative computing between a group of distrusted parties while protecting privacy. Through multi-party secure computing technology, data statistics, classification analysis and other computing work can be carried out on the premise of not leaking identifiable data content to each other, and trusted computing will provide a safe and reliable solution for this.

### **4) Trusted storage:**

Trusted storage mainly refers to: decentralized storage. Decentralized storage has the following characteristics: once data is stored, it is difficult to be tampered with or deleted; all data can be accessed directly, for example, in a distributed network, whether the data is text, video, or music, it can be accessed through Hash values directly access the data. Trusted storage is the core technology of Web3.0 and will be responsible for the content storage and access protocol of the entire Web3.0. The future distributed storage will support the content of the entire network storage and distribution.

### **5) high-speed internet:**

When the computing and storage capabilities of each node of Build Your Dream Kingdom (such as computers, mobile phones, IoT devices, etc.) reach a certain level, the

**BUILD YOUR  
KINGDOM**

network linking each node will be very important. Only when the network bandwidth is high enough, the role of each node can be repeatedly played, and the decentralized server can be realized. The high-speed network is like the soil of the trusted network world. Without this soil, there would be no trusted network. At present, the 5G network is already under construction. In the next 2–3 years, with the implementation of the 5G network, various technical modules in the trusted network will develop rapidly.

### 3.2 Multi-chain parallel development

Sharding based on business: Build Your Dream Kingdom implements data sharding according to business, solves the scaling problem of traditional sharding solutions, and supports large-scale application implementation. Provides a benign internal competition environment: Based on parallel development within the chain, the same application may be developed by multiple partners at the same time, which effectively realizes healthy competition within the ecosystem, is conducive to better and faster self-iteration and upgrade of products, and provides users with better and faster self-iteration and upgrade. Provide the best service experience.

### 3.3 Data tiering

Build Your Dream Kingdom splits the data into three layers: block data, runtime data and off-chain data, and at the same time meets the requirements of reducing the

**BUILD YOUR  
KINGDOM**

cost of existing systems, improving the speed of system consensus, and expanding the dimensions of data on the chain.

Block data: As the underlying data, block data retains the advantages of blockchain, such as irreversibility and tamper resistance;

Runtime data: Save the data needed at runtime by writing to the computing logic on the chain. The transmission of block data only needs to transmit a small part of the hash. When a large amount of data needs to reach a consensus, it can effectively reduce the amount of data transmission, thereby greatly improving the running speed of the block.

Off-chain data: In the off-chain data layer, Build Your Dream Kingdom can connect with traditional data middleware and other databases such as distributed nodes, expanding the channels for the communication between traditional data and blockchain data.

### 3.4 Distributed Trust Framework

The Build Your Dream Kingdom trust model is a mechanism for generating trust between network nodes. It realizes the core logic layer of distributed trust. It mainly includes distributed node protocol, distributed trust model, and distributed trust transfer system. Trust is transferred by the network. The realization of mutual authentication between nodes can also generate trust relationship spontaneously and peer-to-peer.

**BUILD YOUR  
KINGDOM**

- **Verifiable Claims**

Build Your Dream Kingdom Verifiable Claims add digital signatures to prove certain properties of network nodes. It can be stored and transmitted as a unit of data and can be verified by any node. Verifiable claims mainly include arbitrary data of smart contracts, metadata, content and signatures. Network nodes associated with verifiable claims are divided into three roles: issuing, storing, and validating.

- **Issue**

Any network node can issue verifiable claims about any property of other network nodes. When issuing a verifiable statement, you can set the validity period of the statement, after which the statement will be automatically invalidated.

- **Storage**

Verifiable claims can be divided into public claims and privacy claims. The public statement can be stored in the distributed ledger of Build Your Dream Kingdom; the privacy statement is usually stored in the client of the network node and managed by the network node itself.

- **Verify**

Verification of a verifiable statement does not require interaction with the issuer of the statement. It is only necessary to obtain its information from the distributed ledger of the Build Your Dream Kingdom network, and then use the digital signature in the verification statement to verify the validity of the statement.

**BUILD YOUR  
KINGDOM**

### 3.5 Cross-chain technology and asset transfer process

The Build Your Dream Kingdom technical team named the Build Your Dream Kingdom heterogeneous cross-chain basic framework Build Your Dream Kingdom Protocol Connector. Although the implementation of the relay chain is very complex, Build Your Dream Kingdom still uses this solution because of its fully decentralized nature.

Due to the complexity of the information base between the heterogeneous chain architectures, it is very difficult to cross the heterogeneous chain. This includes differences in block header structures, encryption algorithms, consensus mechanisms, message verification mechanisms, and state storage methods. Therefore, it is necessary to technically ensure the reliability of information interaction and the security of the chain network system, and ensure that the state information generated by the native chain is transmitted through the middle. The cross-chain information of the original chain received on the target chain has not been tampered with. Although the development is very difficult, Build Your Dream Kingdom hopes to realize the smooth flow of digital assets between Build Your Dream Kingdom and other public chains. Heterogeneous cross-chain is a link that must be realized.

BUILD YOUR  
KINGDOM

### 3.6 NFT standard protocol

In order to realize more application value of NFT, Build Your Dream Kingdom has extended the NFT protocol as follows:

- Build Your Dream Kingdom designed an NFT shuttle mechanism. After locking the NFT in the specific DApp A to which it belongs, the user can request to be shuttled to DApp B. After obtaining the consent of the decentralized applications A and B, the NFT can shuttle from A to B.
- Build Your Dream Kingdom On the basis of the mainstream NFT protocol, it will add space to describe the data required by NFT in different decentralized applications. This data space will describe the performance of the NFT in a specific decentralized application and can only be modified by the application in which the NFT resides. Content in this data space can be easily accessed in a blockchain environment, allowing users to view the functionality and performance of NFTs across different applications and past usage scenarios.

BUILD YOUR  
KINGDOM

# ECOSYSTEM

---

## 4.1 Chain Tour

Build Your Dream Kingdom is Metaverse's first super-futuristic sci-fi blockchain game, with delicate and smooth graphics, a strong sense of substitution and an excellent experience. Through 3D modeling, the architectural space is made clear. Diverse city scenes provide players with more choices and rights.

Build Your Dream Kingdom will shape the next generation of games based on the game's monetization effect and build an open metaverse for the global community. Build Your Dream Kingdom provides users with a variety of game scenarios: space exploration, battle and defense of the earth, and space for social and economic development. The game relies on a closed economic system based on limited resource emissions.

It incorporates a "play to earn" model into all of its in-game items. This concept gives players ownership of all items in the game and motivates them to play and progress in the game. Build Your Dream Kingdom NFT will gradually participate in the construction and application of the game industry, combine NFT with games to make entertainment more diversified, and the ownership of game assets will be confirmed and transferred more smoothly through NFT.

**BUILD YOUR  
KINGDOM**

Construction of Surreal Sci-Fi Ecological Platform

#### 4.1.1 Fair Blind Box Game

In the Build Your Dream Kingdom game, you can buy NFT blind boxes and open blind boxes to get game props and other resources. Players can buy blind boxes from the game app store and obtain the substances needed for the game in the form of NFTs. The NFT rarities in the blind box are obtained randomly, and any player has a chance to acquire popular or high-value game resources. Unpacking blind boxes are all on the blockchain to ensure their openness, fairness and transparency.

#### 4.1.2 Rich gameplay

By combining blockchain + NFT + survival construction, game mechanics and generous rewards, players can get the high rewards brought by blockchain games and enjoy themselves through survival and creation games. As the game develops, it will open up different levels and gameplay, giving players a different gaming experience.

### 4.2 Decentralized Exchange (DEX)

Build Your Dream Kingdom's decentralized trading platform that does not store user funds and personal data on servers, but only serves as an infrastructure to match buyers and sellers who wish to trade digital assets.

Its advantage is:

- No permission: anyone, anywhere, can access and use without permission;
- Zero trust: based on smart contracts to get rid of third-party trust, transparent and secure;

**BUILD YOUR  
KINGDOM**

- Censorship-resistant: Crypto-based value transfers that cannot be blocked;
- Uninterrupted: 7x24 uninterrupted, no single point of work.

Build Your Dream Kingdom is a trading platform that can realize a fully decentralized future idea, which can help customers to build simply and quickly

A DEX, and provide some technical or operational support for the normal operation of a DEX, help customers save technical costs or learning costs, and make them play their core advantages. And introduced the concept of co-construction, sharing and co-governance into the DEX field, pushing DEX into a new era, and depicting a meta-universe of crypto-asset trading for crypto traders. This is the value and meaning of Build Your Dream Kingdom.

## 4.3 Game NFT Market

Every NFT in the Build Your Dream Kingdom game, whether it's a prop, a piece of clothing, or even a building, contains its own internal characteristics. All of these objects can be presented as classic NFTs and can be sold on any market in any preferred currency. Each NFT is a limited edition, very rare, and can be easily converted to any cryptocurrency in any market. This unique coin is absolutely liquid and can be traded for any cryptocurrency.

**BUILD YOUR  
KINGDOM**

#### 4.3.1 NFT exchange

In the Build Your Dream Kingdom game, players can also purchase the required NFT game props, where players can enjoy the best experience at the lowest cost. They can freely exchange NFTs in the marketplace and publish sale and purchase prices. The market will generate ongoing profits for many players. The token used in the market is Build Your Dream Kingdom, and all transactions are generated in the Build Your Dream Kingdom smart contract. This marketplace is functionally superior, offering the best communication experience and monetization opportunities.

#### 4.3.2 NFT auction

Creators and sellers can initiate NFT auctions on the marketplace to promote their NFTs to more potential buyers for the highest selling price.

#### 4.3.3 NFT series

Open your wallet to show your NFT. By collecting more NFTs, future app upgrades can transform, expand, and upgrade the rare attributes of player NFTs. This will surprise you. Collection heralds a huge future space.

Players will use collections to compete for their place in the rankings. If the item reaches a certain level, you can get considerable rewards, and the rewards for each level decrease from high to low.

### 4.4 Metaverse Art Space

Build Your Dream Kingdom Metaverse will build a virtual

**BUILD YOUR  
KINGDOM**

fashion castle for users to experience cross-space art performances and enjoy digital virtual fashion. Through the most authentic five senses experience of each user, a subversive parallel world is created. The inseparable mind of the parallel world will break through your imagination and awaken your senses!

### 1) "Across Space" Art Exhibition Hall

In the "cross-space" art gallery of Build Your Dream Kingdom, the combination of virtual and reality will be closer, creating a fascinating and difficult art palace for users. Users can choose the art exhibition halls to visit according to their preferences, and can purchase their favorite NFT works.

### 2) Digital Virtual Fashion Show

Many 3D artists and creative designers gather here to premiere multiple products at the Build Your Dream Kingdom Metaverse show. In the Build Your Dream Kingdom Metaverse, users appear to be on the scene of a fashion show and can participate in events. At the same time, the Build Your Dream Kingdom Metaverse will also feature the world's first virtual supermodel, who will try on and recommend fashion products to users.

Build Your Dream Kingdom Metaverse creates more possibilities for collaboration between the fashion industry and digital technology, and enables scenarios not possible in reality shows like the popular Nyan Cat on Youtube, reflecting the interlacing of space and time .

**BUILD YOUR  
KINGDOM**

### 3) Virtual auction house

Users can auction NFT works in the Build Your Dream Kingdom NFT Metaverse virtual auction hall. In a real 3D scene, users can conduct point-to-point information interaction. This auction experience far surpasses other forms of media.

### 4) Immersive Virtual Concert

The immersive virtual super concert will make imaginative stage dreams come true, open the door to connect the virtual and reality, enter the entertainment world that is not restricted by the laws of physics, and enjoy another life of "the unity of the five senses". While gaining new audiovisual enjoyment, the singer and fan completed the most meaningful "air hug".

## 4.5 Revenue Aggregator

Build Your Dream Kingdom is a revenue aggregator that automatically selects the highest yield, siphoning the value of each DeFi product, and its goal is to maximize revenue for holding assets in a lossless way.

- Liquidity mining

Build Your Dream Kingdom seeks to generate governance tokens in a relatively fair and equitable way that is related to product use. Build Your Dream Kingdom comes from fair and open mining, motivating a large number of users and funds to witness the birth of an open and free financial world. In the later stage, the community will vote to determine more liquidity mining and behavioral mining methods.

**BUILD YOUR  
KINGDOM**

- One-click aggregated lending

Build Your Dream Kingdom builds a distributed autonomous lending hub with nodes as the core. Nodes will flexibly handle many lending businesses, and also further improve the efficiency and functions of the traditional lending sector. Build Your Dream Kingdom has changed the essence of the DeFi lending sector by rebuilding the lending model. The introduction of traditional users into the ecosystem will further expand the amount of funds and user volume in the DeFi world. The one-click aggregated lending service launched by Build Your Dream Kingdom can aggregate the current mainstream DeFi lending platforms, such as MakerDAO, Compound, Dharma, dYdX, etc. This will greatly expand the underlying assets that can be used for lending, enhance the liquidity of users' assets, and optimize the best interest rate to reduce users' borrowing costs.

## 4.6 DApp launcher

Build Your Dream Kingdom has an intermediate layer between the base protocol and the community, which helps the community tokenize community assets through airdrops. Using Community Tokens, it is natural to embed Build Your Dream Kingdom into various application scenarios.

Build Your Dream Kingdom can be used as a blockchain built on the bottom layer. Once connected to other public chains as a subchain, such as ETH, Polkadot, etc., Build

**BUILD YOUR  
KINGDOM**

Your Dream Kingdom is like a meta-application that can be integrated with ETH's decentralized finance , The decentralized social network of Build Your Dream Kingdom and the decentralized storage of IPFS are combined. This brings composability to the community's DApp scenarios. Just as most DeFi projects are a combination of Dex, loans, liquidity mining, etc., various application scenarios will be combined around Build Your Dream Kingdom in DApps required by the community and play an important role. At the most basic level, Build Your Dream Kingdom makes it easy for anyone to offer services such as community staking mining, community decentralized trading, and decentralized lending.

**BUILD YOUR  
KINGDOM**

Construction of Surreal Sci-Fi Ecological Platform

# ***DAO ORGANIZATION***

---

Build Your Dream Kingdom operates a DAO community-driven operation with this value at the core of everything it does. DAOs give everyone an equal opportunity to develop, participate and use their strengths to help projects develop and freely decide how to do it, and providing tools is a social responsibility and resource for Build Your Dream Kingdom in a virtual space, creating a fun and adaptive personal prosperity and monetization environment.

## **5.1 DAO composition**

In order to build a DAO with extensive influence and high activity, ecological construction will become the core of Build Your Dream Kingdom DAO. With the help of the DAO organizational structure, a fair and efficient ecological construction framework will be established. The Build Your Dream Kingdom DAO community is composed of more than 10,000 members of the Medal of Honor. During the development process, it will continue to screen and absorb outstanding talents. In the future, it will help and launch more projects to help the development of the game ecosystem.

**BUILD YOUR  
KINGDOM**

The core of Build Your Dream Kingdom DAO is the "Medal of Honor Committee", which is elected by the DAO to establish the Medal of Honor decision-making committee. Members with the Medal of Honor will have functions such as platform proposals, voting, governance, pledge, and dividends.

## 5.2 DAO proposal and voting procedure

The Build Your Dream Kingdom community DAO enables projects to be ultimately governed by their community, with contributions submitted by contributors, discussed on community media, and voted on by community members. All recommendations must be approved by members of the community before they can be implemented. Community DAOs enable the community to reward some non-standard contributions. Proposals and voting procedures are as follows:

1. Community contributors submit proposals;
2. The community fully discussed the proposal;
3. Token power holders vote on proposals;
4. The DAO Foundation automatically assigns tokens to approved proposals;

## 5.3 Medal of Honor Functions

**proposal**: Proposals related to DAO, including but not limited to financial or technical support for ecological applications, mainnet technology upgrades, online and offline marketing activities planning, etc., can be released, involving all aspects of the operation of each project.

BUILD YOUR  
KINGDOM

**Vote :** Participate in the voting to decide whether high-quality projects can pass, and participate in the voting to decide whether high-quality games can be launched on the platform.

**Governance:** Participating in the election and governance of the DAO community will analyze the feasibility from various perspectives (including finance, legal affairs, feasibility, execution difficulty, short-, medium- and long-term value, etc.)

**pledge:** Stake the Medal of Honor to get the top mining token income incentive. For details of pledge, please refer to the Staking Mining Rules.

**Dividend :** The Medal of Honor will become a special credential within the ecosystem. Holding the Medal of Honor means being a member of the DAO community. On this basis, the assets released in the ecosystem will be encouraged to airdrop the Medal of Honor holders. These airdrops It is persistent and of considerable value. At the same time, the platform will contribute a part of the game's profits to set up a bonus incentive pool, and distribute the weighted dividends to the Medal of Honor holders.

**BUILD YOUR  
KINGDOM**

Construction of Surreal Sci-Fi Ecological Platform

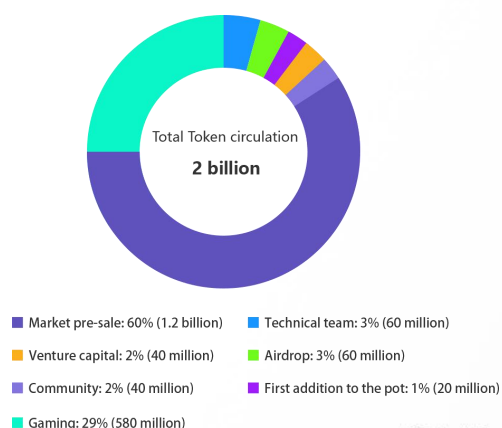

# TOKEN ECONOMY

The ecological platform token of Build Your Dream Kingdom is BYDK. Its main functions can be used for games. It will also add a variety of ecological application scenarios, access or use exclusive ecological applications, payment networks, community voting, etc., and set up a BYDK deflation mechanism.

## 6.1 Issuance and distribution of BYDK

Total Token circulation: 2 billion

- Market pre-sale: 60% (1.2 billion)
- Note: An account can have BYDK worth 0.1–10 bnb
- Technical team: 3% (60 million)
- Venture capital: 2% (40 million)
- Airdrop: 3% (60 million)
- Community: 2% (40 million)
- First addition to the pot: 1% (20 million)
- Gaming: 29% (580 million)

BUILD YOUR  
KINGDOM

Construction of Surreal Sci-Fi Ecological Platform

In the game ecosystem, BYDK tokens will be able to use the following scenarios:

Purchase and exchange of production resources such as NFT game props;

Improve the game level, and draw blind box games, etc.;

Metaverse space construction, production and life, etc.;

Financial transaction requirements such as DEFI liquidity mining;

Decentralized transactions, and gas fees.

## 6.2 Deflationary mechanism:

There is also a deflation mechanism in the ecology of Build Your Dream Kingdom, and 3% of the amount charged for each transfer of the user will be destroyed in the black hole to realize the deflation mechanism. As a result, there is a reasonable circulation path in the game ecology, so that players can innovate a variety of gameplay and cooperation mechanisms in this system, and on the other hand, they can also maintain a good circulation of the mechanism.

**BUILD YOUR  
KINGDOM**

# ***RISK WARNING AND DISCLAIMER***

---

## **7.1 Risk warning**

As a new investment model, digital asset investment has various risks. Potential investors should carefully evaluate investment risks and their own risk tolerance:

- **Token sales market risk**

Since the market environment of token sales is inseparable from the situation of the entire digital currency market, if the overall market situation is sluggish, or there are other uncontrollable factors, it may cause the digital currency itself to have good prospects, but the price is still undervalued for a long time. state.

- **Regulatory risk**

Since the development of blockchain is still in the early stage, there are no relevant regulatory documents such as pre-requirements, transaction requirements, information disclosure requirements, and lock-in requirements in the crowdfunding process. And it is still unclear how the current policy will be implemented. These factors may have an uncertain impact on the investment and liquidity of the project. Blockchain technology has become the main target of supervision in major countries in the world, and the existing regulatory license or tolerance for Build Your Dream Kingdom or this public sale in any country may only be temporary.
